

Security solutions @BlackBearIT

Wireless CCTV systems from just £250!

Monitor just about anything with a complete wireless CCTV system from as little as £250 one off cost, even better have a maintenance agreement so should you have problems the up keep is just as cost effective.

We can install a complete solution to monitor just about anything from your place of work or home for your peace of mind, keep an eye on your staff, customers or valuables anywhere anytime from just about any device.

Increased productivity

As the saying goes you can't be in two places at any one time, well with a secure CCTV system you can almost be. Ensure that your staff are doing what they should be and are safe. You can claw back all those hours of lost productivity by ensuring that staff is doing what they should be, when they should be, without having to stand over them. Put an end to the countless hours of running round checking that everything is done and everyone doing what they should be.

Security & peace of mind

Our cameras are HD ready and infrared, what does this mean to you? Well picture quality is crystal clear making it easy to identify objects or people on camera, automatic triggering on motion and night vision means our cameras can see as well at night as during the day so lurking in the dark is no longer a good place to hide. Offsite recording and cloud centralisation means you can view your cameras anywhere and recordings are safe and secure. Damaging a camera or even stealing it will not erase the evidence, also these run 24 hours a day 7 days a week.

Possible applications

Do you often have to move between offices, monitor land and assets whether this be equipment, livestock or people. Well this could suit you perfectly. Do you have a shop where you need to monitor the general public for theft or indeed your staff for performance? The applications for such a system are endless.

As the cameras are wireless should you chose to move one this can be done cost effectively, all you need is power and a wireless connection, no expensive network rewiring. The solution is scalable so if you need another camera just buy a camera, you don't need another full system.

Pricing

All components of a Wireless CCTV system are available individually however we have some simple bundles to get you started. These start from as little as £250 and increase as we add cameras and configuration time. The bundle price is what you pay, we won't add countless hours to the charge or inflate the costs. Any issues are highlighted during a survey so you know exactly what this will cost before you commit to buy.

Wireless CCTV Systems

Benefits at a glance

- Scalable:** Easily add additional cameras should you grow the system
- Resilient:** All recordings are kept offsite and can be accessed with a simple internet connection.
- Affordable:** Prices start from as low as £250 with no additional ongoing costs.
- Cost saving:** Save money by working more efficiently.
- Adaptable:** Move cameras without costly expense, cameras simply require power and WI-FI.
