

Communications @BlackBearIT

## Call anywhere from 1p per minute!

Call anywhere in the world for a local rate and call any other SIP user completely free using your internet connection. By using Draytek and Cisco technology, you are not bound to one location any more. With this full featured system add a mobile phone as an extension easily and make calls to and from your office for free.

### Save costs

Using our Unified Communication systems call anywhere in the world and only pay local charges. Your call is routed using your internet connection and then breaks out closer to the area your calling minimising call charges. With crystal qualities even have phones in remote locations and switch your own calls for remote workers. All you pay is your charges no line rental and at cheaper rates than BT you will start saving money as soon as the system is installed. Communication no longer has to be an expense and with modern day high speed internet via existing phone lines and HSDPA/4G more is possible than ever before.

### Secure voicemail and call recording

Record calls to protect yourself and have your voicemail recorded and emailed to you. Never miss a call again and pull detailed call records including missed/dropped calls. With Cisco handsets configure multiple call routes and directories. Limit calls and block incoming and outgoing specific numbers. All phones can be powered over the network connection saving costly wiring.

Whether it's one or fifty handsets scale the solution to your needs.

### Business Continuity

Although we all hope it will never happen to us how would you continue to operate should a disaster happen in your workplace. We can swing the calls instantly, divert calls internally within your business easily and efficiently even bring the entire phone system up on a HSDPA connection if you lose your internet connection! All systems can be configured to failover to use 3G so you wouldn't miss a beat.

### Fully managed

We can fully manage the system remotely should you wish and provision handsets rapidly. Automate out of hours, bank holiday routing and interactive voice menus easily. The phone system will also manage your internet connection and ensure that you get the most from your connection shaping the traffic to ensure you always have enough bandwidth to operate effectively.

Our solution is very cost effective priced at only a fraction you would expect from other systems such as Aastra and Mitel.

Save money without losing features or reliability.

Unified Communications

## Benefits at a glance

**Scalable:** Add up to 50 extensions easily without needing to upgrade your PBX

**Resilient:** Supports 3G/HSDPA backup automatically

**Affordable:** Only pay for what you need and scale as required

**Cost saving:** Only pay local charges for calls whether it be down the street or China

**Multiuse:** Manages your internet connection as a router and even a wireless router.
